

Two-Spotted Spider Mite

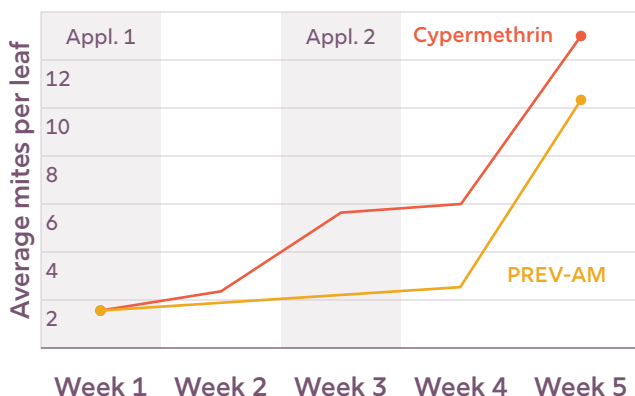

PREV-AM® works through a unique mode of action by physically suffocating and desiccating insects, mites, and diseases. One of its key advantages is its ability to disrupt the pest life cycle by stopping outbreaks through the prevention of viable egg production.

- Decreased mite flareups
- Superior spreading and coverage
- Improves plant canopy penetration
- Fast acting – Improves knockdown
- Broad spectrum
- Convenient and easy to use

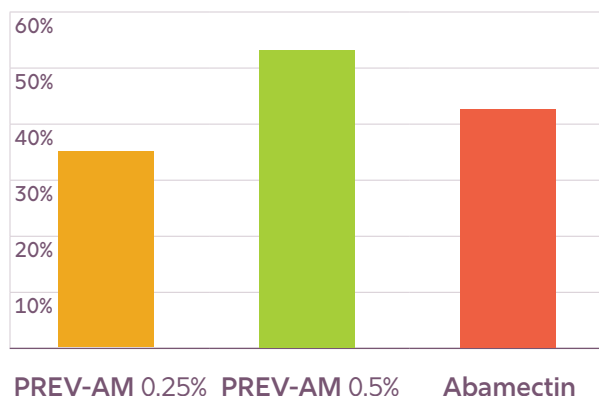

ADULT

DECREASING FLAREUPS

IN VITRO CONTROL AT 72 HOURS

EGGS PER FEMALE
