MITICIDE & FUNGICIDE  
RESIDUE-FREE BLEND

 **Rovensa  
Next**

Cinnaction<sup>®</sup> is an OMRI-certified, broad-spectrum biopesticide combining cinnamon, castor, and sunflower oils. It provides fast-acting control of powdery mildew, mites and more, with no restricted entry interval (REI) and maximum residue limit (MRL) exemption. Cinnaction can be used in integrated pest management (IPM) programs in both organic and conventional agriculture.

### FEATURES & BENEFITS

- Cinnaction is a broad-spectrum liquid biopesticide (FIFRA, section 25b) for control of insects, mites, fungi and bacteria.
- Unique formulation with cinnamon oil, castor oil, and sunflower oil.
- Features phenolic compounds eugenol and cinnamaldehyde.
- Optimized formulation for crop safety and extended pesticidal activity.
- OMRI certified for organic farming.
- 0 day REI & 0 day preharvest interval (PHI).

### MODE OF ACTION

- Cinnaction works by overstimulating insect nervous systems, disrupting pheromone tracking, and causing respiratory collapse.
- Acts as a fungicide and bactericide by disrupting cell membranes and inhibiting spore germination and mycelial growth.
- Primarily targets powdery mildew and mites, with side effects on secondary pests and diseases.
- Provides a fast-acting knockdown effect.

### ADDED VALUE

- Broad-spectrum activity and novel modes of action help manage pesticide resistance
- Multi-faceted approach to pest control.
- Effective rotational partner in either conventional or organic crop production
- Effective in IPM programs.
- Easy access to the crop with no REI.
- Manage pests & diseases right up to harvest with no PHI and exemption from MRLs.
- No visual residue after application.
- Allows growers to access the most restricted and profitable markets.

### AVAILABLE IN

**2.5**  
gallon bottle
