

Bio-Mulch

Accelerate the breakdown of crop residues

Bio-Mulch

Bio-Mulch^{\mathbf{m}} is a biological product designed to accelerate the decomposition of crop residue and enhance nutrient cycling in the soil. It is specifically intended to increase local populations of cellulose digesting microbes.

FEATURES & BENEFITS

Bio-Mulch $^{\text{TM}}$ is a unique blend of nutrients and fermentation enzymes that work to encourage the natural bio-degradation process. Bio-Mulch does not contain any living organisms.

- Nitrogen (N) 7.0%
- Cobalt (Co) 0.2%

MODE OF ACTION

- Increase cellulose digesting microbes.
- Accelerate the breakdown of stubble, stalks, roots, and organic debris.
- Improves nutrient cycling.

ADDED VALUE

- Improves the efficiency of minimum tillage systems.
- Accelerates nutrient release.
- Reduces nutrient tie up.
- Increased nutrient cycling.
- Improves planting conditions.
