

Sysstem-VT

Supply key nutrients to row crops
transitioning to the reproductive stage

System-VT

System-VT™ is a foliar fertilizer containing potassium, calcium, and magnesium phosphite and boron. System-VT is designed for corn and other broad acre row crops. It is particularly well suited for applying key nutrients at an important physiological stage, the transition from vegetative to reproductive growth. System-VT has the unique ability to enhance uptake and mobility of nutrients within the plant as well as mitigate heat or plant stress, making it a good tank mix partner with other crop management tools.

FEATURES & BENEFITS

System-VT is a phosphite solution blend combining potassium, calcium, magnesium, and boron. It is Powered by Symspray®, a stabilized seaweed solution.

- Soluble Potash 10.0%
- Calcium (Ca) 1.0%
- Boron (B) 0.15%
- Magnesium (Mg) 0.7%
- *Ascophyllum nodosum*

MODE OF ACTION

- Systemic nutrition and mobility due to phosphite form
- Enhances natural root flushing process
- Powered by Symspray® for stress mitigation

ADDED VALUE

- Powered by Symspray
- Rapidly delivers key nutrients at peak demand for transition from vegetative to reproductive stages.
- Low pH improves uptake and tank-mix compatibility
- Stimulates natural root flush
- Mitigates environmental stress
