Aurora is designed for both foliar and soil use on crops to prevent or correct sulfur deficiencies. Proper nutrient management will help maximize crop quality and yields. Foliar fertilization is intended to supplement standard ground fertility programs and will not by itself provide all nutrients normally required by agricultural crops.

Directions for Commercial Use:

Foliar: Apply 1 to 8 pints per acre with sufficient water for thorough coverage. For best results spray in early morning or late afternoon. Do not apply during the "sunlight" hours when air temperature is above 90°F.

Ground: Apply 1 to 8 quarts per acre. Ground application can be via conventional ground sprayer or metered through irrigation. If you have any questions regarding mixing or application rates contact your Agro-K dealer before using this product.

Mixing: Aurora may be mixed with most fertilizers, insecticides and/or fungicides. A compatibility check is recommended. Check with your field representative for specific recommendations. Warning: The application of fertilizing materials containing molybdenum (Mo) may result in forage crops containing levels of molybdenum (Mo) which are toxic to ruminant animals.

Guaranteed Analysis:

Sulfur (S)	3.0%
Copper (Cu)	1.5%
Manganese (Mn)	0.2%
Molybdenum (Mo)	0.1%

Derived from
Copper Sulfate, Dimethyl Sulfone,
Manganese Sulfate, Sodium Molybdate
