Directions for Commercial Use:

Bio-Mulch® is designed to accelerate the decomposition of crop residue and enhance nutrient cycling. Bio-Mulch® works by encouraging the natural bio-degradation process. Bio-Mulch® needs adequate soil moisture to work. Dry soils should be irrigated or product should be applied prior to a rain event. Bio-Mulch® needs to be in contact with soil and crop residue to work effectively.

For annual crops - the most effective time to apply Bio-Mulch® is at or immediately post harvest. Chopping and discing crop residue will increase the speed at which Bio-Mulch® works but is not necessary for the product to work. Bio-Mulch® will work effectively in no-till agriculture.

For perennial crops - Bio-Mulch® can be applied at any time during the growing season where compost, cover crops, wood chips or other residue needs to be broken down.

Apply Bio-Mulch® at 1-2qts/ac. Bio-Mulch® can be applied by ground or aerial application or via irrigation equipment. If soil surface is dry, it is recommended to apply Bio-Mulch® with adequate water to wet soil surface. If soil moisture level is adequate or if crop residue will be tilled or disced under, minimal water is needed during application.

Guaranteed Analysis:

Total Nitrogen (N)	7.0%
7.0% Urea Nitrogen	
Cobalt (Co)	0.20%

Derived from
Low Biuret Urea, Cobalt Carbonate
