Our Technologies

OROWET® Technology

A proprietary combination of cold-pressed citrus oil and a patented surfactant mixture forms the base for manufacturing a diverse range of products, including adjuvants, pesticides and soil conditioners.

Products containing OROWET provide a more sustainable alternative with reduced environmental impact compared with traditional chemistries.

Metabol-8™ Technology

Metabol-8 Technology is the cumulation of years of experience and research from around the world working with botanical extracts. It utilizes eight key components, including secondary plant metabolites derived from heirloom citrus, to enhance plant metabolism directly.

Crops struggle to convert nutrition into yield because metabolism is under constant biotic and abiotic pressure. Metabol-8 Technology is the backbone for new and future products aimed at solving the problem of metabolic inefficiency and improving nutrient utilization under stress.

CLEAN Series

CLEAN branded nutrient products are specifically formulated for organic crop producers. This comprehensive line of organic crop inputs is designed to help growers achieve their crop nutrition goals while adhering to USDA National Organic Standards. Products are certified by the Organic Materials Review Institute (OMRI), California Organic Input Material (OIM) program and Washington State Department of Agriculture (WSDA).

Natural organic chelation combined with a proprietary fermentation process results in nutrition that is both gentle on plant tissue and rapidly absorbed to meet the needs of developing crops. CLEAN means minimized environmental impacts with no compromise to profitability.

System® Series

System® series phosphite-based foliar nutrients are designed to enhance crop quality and overall plant health. Nutrients complexed to a phosphite ion are highly systemic, allowing them to travel rapidly throughout the plant. Phosphite being both phloem and xylem mobile enhances the rapid delivery of applied nutrition and is crucial for meeting “peak nutrient demand timing.”

System series products enhance balanced soil fertility programs and are intended to supplement traditional fertilizer practices. Phosphite-based nutrients improve the overall efficacy of soil applied fertilizers by inducing a “root flushing” effect which enhances both the natural root exudate process and foraging capacity through increased root mass.

Dextro-Lac® Series

Dextro-Lac® products utilize a proprietary complexing process in which two biologically important carbohydrate molecules—dextrose and lactose—are used to stabilize and protect nutrients. This sugar-based complex is easily transported across cell membranes ensuring rapid and complete penetration of plant tissues.

Dextro-Lac is an ideal carrier for plant nutrients, and once inside the cell can be easily metabolized by the plant system. Unlike traditional chelated foliar nutrients, Dextro-Lac formulations require less energy expenditure to access the nutrients making them immediately plant available.

Biocontrol

PREV-AM

PREV-AM® is a versatile 3-in-1 contact fungicide, insecticide, and miticide that provides broad-spectrum, fast-acting control, and improved spray coverage. Ideal for use in IPM programs as an alternate mode of action. PREV-AM has no preharvest interval and is exempt from residue requirements on registered crops.

TYPHOON

TYPHOON® is a contact fungicide for field and greenhouse use, effectively controlling some of the most challenging diseases like *Botrytis*, downy mildew, *Alternaria* and *Phytophthora*. With no REI or PHI, TYPHOON is ideal for disease resistance management. It can be rotated with other fungicides and used late in the season up until harvest.

System-K Blue

System-K Blue is an EPA-labeled potassium phosphite solution for control or suppression of a wide range of plant diseases in both soil and foliar applications. It acts primarily as a preventative fungicide by acting directly on the pathogen and stimulation of natural host defenses.

Cinnaction

Cinnaction® is an OMRI certified, broad-spectrum biopesticide combining cinnamon, castor, and sunflower oils. It provides fast-acting control of powdery mildew, mites and more, with no restricted entry interval and maximum residue limit exemption. Cinnaction can be used in IPM programs in both organic and conventional agriculture.

Thymic

Thymic® is an OMRI certified, broad-spectrum liquid biopesticide combining thyme, castor, and sunflower oils, offering rapid knockdown of aphids, whiteflies, bacteria and more. Thymic has no REI or visual residue and is ideal for IPM programs in organic and conventional farming.

Garland

Garland® is an OMRI certified insecticide and repellent formulated with garlic oil. It effectively reduces pests through sulfur-based volatile terpenes. Garland is ideal for IPM programs in organic and conventional agriculture, with no garlic taste in crops.

MILAGRUM PLUS

MILAGRUM PLUS® is an OMRI certified, EPA-registered organic fungicide with *Bacillus subtilis* strain IAB/BS03 in a robust formula with a 2-year shelf life. The product can be used to enhance plant defenses against disease infections. MILAGRUM PLUS can be used in IPM programs in both organic and conventional agriculture.

Adjuvants

VINTRE

VINTRE® is a highly effective foliar adjuvant designed for trees, vines, berries, and small fruits. It features patented OROWET® Technology for enhanced spreading and penetration of pesticides and nutrients.

WETCIT

WETCIT® is a cutting-edge penetrant, spreader and wetting agent for use in vegetables and broad acre crops. It serves as a highly effective non-ionic surfactant that enhances the performance of foliar-applied pesticides and nutrients.

OROBOOST

OROBOOST® is an effective, certified organic non-ionic surfactant formulated with patented OROWET® Technology to enhance the performance of foliar-applied pesticides, herbicides, and nutrients.

ORO-HSMOC

ORO-HSMOC® is a high surfactant methylated oil concentrate formulated with OROWET® Technology. It enhances the effectiveness of post-emergent herbicides requiring MSOs or COCs, ensuring efficient translocation and superior weed control.

ORO-RZ

ORO-RZ® is an advanced soil adjuvant designed to improve performance of soil-applied pesticides and nutrients. Utilizing patented OROWET® Technology to improve soil wetting, water penetration, and uniform distribution of partner chemistries.

TRANSFORMER

TRANSFORMER® is a soil wetting aid and soil penetrant that conditions soil by improving water infiltration, to overcome physical soil limitations and thereby enhancing water use and irrigation efficiency.

ATTITUDE

ATTITUDE® is a premium water conditioning agent and acidifier designed to reduce the pH of tank mix spray solutions and ensure optimal performance of crop inputs.

ADJUVANTS

SQUALL

SQUALL® is an acidifier to help reduce the pH of the spray solution paired with an effective spreader to increase the coverage of foliar pesticides.

APE/NPE
FREE

PK ASSIST

PK ASSIST® is a soil conditioner, penetrant and humectant that is highly compatible with liquid fertilizer mixtures. It can be applied with high-salt or liquid starter fertilizers to improve soil moisture, nutrient availability and root development.

Nutrition

GALACTEK

GALACTEK® is a high efficiency, ultra-low use rate product featuring Metabol-8 Technology. Its proprietary blend of low molecular weight organic acids enhances nutrient availability and moisture retention in soil. This improves root development and nutrient uptake, while Metabol-8 Technology maximizes metabolic efficiency to ensure plant resilience and improved performance under stressful conditions.

BioMax O.C.

Ca 1% Co 0.2% Mo 0.05%

BioMax O.C. is a non-living microbial food source and micronutrient designed to be compatible with ortho- and polyphosphate-based starter fertilizer blends. It accelerates the biological activity of beneficial soil microbes to improve soil nutrient availability.

Bio-Mulch 7-0-0

N 7% Co 0.2%

Bio-Mulch® is a biological product designed to accelerate the decomposition of crop residue and enhance nutrient cycling in the soil. It is specifically intended to increase local populations of cellulose digesting microbes.

Symspray 0-0-1

Mn 1.5% K₂O 1% Co 0.17% Zn 0.7%

Symspray® is a stabilized seaweed and micronutrient foliar spray solution designed to reduce plant stress at critical physiological growth stages. It aids in plant growth, nutrient translocation, root development, and both physiological and environmental stress relief. Cold water-sourced *Ascophyllum nodosum* is used as a base due to its proven efficacy, higher natural compound levels and better product performance.

NUTRITION

Vegenergy 4-0-0

N 4%

Vegenergy® is a highly concentrated L-α free amino acid liquid fertilizer derived from protein hydrolysate designed to increase crop growth and production. It improves conditions for tolerance of abiotic stress making it a versatile tool for consistent crop production, particularly between bloom and setting in high-value crops.

Aurora

S 3% Cu 1.5% Mn 0.2% Mo 0.1%

Aurora is a specialized blend of sulfur and specific micronutrients designed to correct or prevent deficiencies. Aurora has been proven effective in enhancing the coloration of Honeycrisp apples.

KDL 0-0-24

K₂O 24%

KDL® is a foliar macronutrient designed to quickly penetrate plant tissue and provide easily metabolized and mobilized potassium. KDL is derived from potassium carbonate and *Ascophyllum nodosum*.

Top Set D.L.

B 9% Mo 0.5%

Top Set D.L.® is a unique blend of boron and molybdenum. Top Set D.L. ensures plants have the nutrition necessary for effective flowering and crop set.

Vigor-Cal

Ca 5%

Vigor-Cal is designed to effectively promote plant vigor and provide a key element in maximizing fruit quality. It focuses on increasing cell wall thickness and durability, which leads to improved fruit firmness and storage life. It is particularly effective during the early season, from bloom through early fruit development, when calcium is most easily incorporated into cell walls.

Vigor-SeaCal

Ca 5% K₂O 0.15%

Vigor-SeaCal is a foliar nutrient combining Vigor-Cal and Symspray® into one convenient package designed to improve fruit quality, yield, and profitability.

Vigor-Cal-Bor-Moly

Ca 5% B 0.4% Mo 0.2%

Vigor-Cal-Bor-Moly is designed to effectively promote plant vigor and provide key elements in maximizing fruit quality. Combining boron and molybdenum with the calcium make it an excellent fit for prebloom sprays to improve fruit set and quality.

Vigor-LeafMax

Zn 2.25% Mn 1% S 1% Fe 0.75% Cu 0.5% Mg 0.5% Mo 0.1% Co 0.01%

Vigor-LeafMax™ is a balanced blend of complexed micronutrients crucial for regulating a wide range of metabolic processes in plants.

NUTRITION

Zinc +5 D.L. Zn 4% Mn 2% Fe 1% Cu 0.5% Mg 0.5% Mo 0.2%

Zinc +5 D.L.® utilizes the Dextro-Lac® manufacturing process to create a carbohydrate-based micronutrient package that can quickly penetrate plant tissue and be easily metabolized.

Agrobrest Series

Agrobrest® is a series of liquid fertilizers specifically designed for foliar applications, where product purity is considered critical. Agrobrest liquid plant food delivers a 100% ortho-phosphate formulation and soluble potash derived from food-grade sources. This results in products of unparalleled purity and quality, characterized by a low salt index.

PRODUCTS

- Agrobrest 0-20-20
- Agrobrest 8-8-8
- Agrobrest 10-8-8
- Agrobrest 3-18-18
- Agrobrest 9-18-9
- Agrobrest 21-0-0
- Agrobrest 5-16-16
- Agrobrest 9-24-3
- Agrobrest Boron 10

Clean

CLEAN branded nutrient products are specifically formulated for organic crop producers. Products adhere to USDA National Organic Standards and are certified by the OMRI, California OIM program, and WSDA.

System-Advance

N 5% **Zn** 4% **Mn** 2% **S** 1.25% **B** 0.1% **Mo** 0.01%

System-Advance® is a foliar fertilizer combining nitrogen, sulfur, zinc, manganese, boron and molybdenum in a phosphite formulation. System-Advance is a versatile foliar fertilizer designed to enhance nutrient uptake and mobility in a variety of row crops. Formulated to be compatible with glyphosate and most fungicides makes it easy to integrate into spray programs without additional trips.

System-Bounty **Ca** 2% **Mg** 1% **S** 1% **B** 0.25% **Mo** 0.05%

System®-Bounty is a foliar fertilizer combining calcium, magnesium, sulfur, boron and molybdenum delivered in a phosphite formulation designed to enhance nutrient uptake and mobility. It is specifically intended to enhance reproductive processes and is well suited to support the flowering cycle of crops.

System-Cal **Ca** 4% **Cu** 0.25%

System®-Cal is a calcium and copper foliar fertilizer designed to improve fruit quality, firmness, and shelf life. Calcium is a key component of cell wall development and essential to improving overall fruit integrity. System-Cal is intended to supplement standard ground fertility programs and enhance crop quality and yield.

System-K **K** 20%

System®-K is a foliar fertilizer derived from potassium phosphite making it highly systemic. It enhances nutrient uptake and mobility throughout the plant. This rapid delivery is beneficial for meeting peak nutrient demand timing and is well-suited for addressing potassium deficiency issues during the season.

NUTRITION

System-LeafMax

Zn 3% Mn 1.25% Fe 0.75% Mg 0.5%
S 0.5% Cu 0.5% Mo 0.15% Co 0.005%

System®-LeafMax is a foliar fertilizer combining zinc and manganese in a phosphite formulation with sulfur, magnesium, cobalt, copper, and iron in dextrose/lactose form plus molybdenum. LeafMax is a complete chlorophyll producing nutrient package.

System-Ready

Zn 4.25% Mn 2.75%

System-Ready® is designed for early season use in a wide variety of row crops. It delivers zinc and manganese where they are most needed, including developing roots and foliage. This is especially beneficial when spring soils are cold and wet, limiting nutrient availability and hindering root growth. It is compatible with glyphosate and most other pesticides, making it easy to integrate into spray programs.

System-SeaCal

Ca 4% K₂O 0.15%

System®-SeaCal combines System-Cal phosphite based fertilizer with Symspray®, a natural biological nutritional additive derived from *Ascophyllum nodosum*. System-SeaCal is intended for foliar use on various crops, including fruits, vegetables, and forage crops.

System-VT

K₂O 10% Ca 1% Mg 0.7% B 0.15%

System®-VT is a foliar fertilizer containing potassium, calcium, and magnesium phosphite and boron. System-VT is designed for corn and other broad acre row crops. It is particularly well suited for applying key nutrients during the transition from vegetative to reproductive growth.

Nutra-Sulf

S 7.25%

Nutra-Sulf is a specialized sulfur-based nutrient solution designed to prevent or correct sulfur deficiencies in crops. Formulated from sulfone sulfur, it is a neutral, low salt, biologically active soft sulfur source which has high compatibility with most other agricultural products.

IGNEOUS

S 13% N 6% Mn 1% Zn 1%

IGNEOUS® is a highly effective, neutralized sulfur fertilizer with chelated micronutrients for maximum nutrient uptake and superior crop health. Unlike conventional sulfur products, IGNEOUS is clear and easy to handle, making it a reliable and effective tank mix partner with crop protection products.

Photo-Op

Fe 2% S 1.4% K₂O 1% Mn 0.25% Co 0.015%

Photo-Op is a liquid chelated iron micronutrient blend for use as a soil-applied and/or starter fertilizer. It is specifically designed to maximize iron availability in the soil rhizosphere to address nutrient deficiencies in crops.

Seabest 0-19-19

P₂O₅ 19% K₂O 19%

Seabest is derived only from food grade sources of phosphorous and potassium for unparalleled purity and quality with a low salt index. The formulation includes foliar seaweed, *Ascophyllum nodosum*, optimized to enhance physiological stages such as flowering, fruit set, and fruit retention.

NUTRITION

ENCOURAGE CLASSIC

K₂O 2% **N** 2% **P₂O₅** 1% **Fe** 0.4% **Mn** 0.1% **B** 0.03%

ENCOURAGE® CLASSIC is a balanced fertilizer designed to support vegetative growth and reduce herbicide drag in all crops. It can be applied with glyphosate and other herbicides where crop stunting is a concern. ENCOURAGE CLASSIC is formulated with OROWET Technology to enhance general pesticide performance.

ENCOURAGE NANOCAL

Ca 10% **N** 4% **K₂O** 1%

ENCOURAGE® NANOCAL® is a highly effective submicronized calcium carbonate-based supplement designed to enhance early season plant strength and crop quality. It offers readily available calcium during critical periods of high demand, such as fruit and tuber development. Its unique formulation utilizing OROWET Technology ensures superior absorption and effectiveness.
