

ADJUVANT

ORO-5[®]

NON-PH ADJUSTING
WATER CONDITIONER
& DEPOSITION AID

Rovensa
Next

ORO-5 is a next generation, multi-functional adjuvant that serves as a drift reduction agent and conditions spray water without lowering water pH. ORO-5 contains a proprietary high molecular weight surfactant, sodium citrate salt and humectant.

ORO-5 provides functionality important for effective foliar pesticide applications. Its water conditioning capability eliminates mineral cations in hard water, which can deactivate glyphosate and other pesticides sensitive to high mineral content water. ORO-5 also contains polymers that reduce fine spray droplets to improve drift reduction. Important for foliar applications of contact pesticides, it contains proprietary surfactants and humectants to promote uniform deposition.

MODE OF ACTION

- Does not lower spray tank pH
- Binds cations responsible for hard water
- Reduces drift and improves deposition
- Excellent for low humidity conditions

ADDED VALUE

- Simple solution for retailers and growers
- Flexible, low use rates
- Suitable for ground or aerial applications
- Compatible with OROWET and MYRIAD Technologies

AVAILABLE IN

2.5
gallon bottle

265
gallon tote
